Education

Drexel University, College of Computing & Informatics (Philadelphia, PA) **September 2026**
Bachelor of Science in Computer Science, Minors in Math & Data Science **GPA: 3.80/4.00**

- **Relevant Coursework:** Software Engineering, System Architecture, Databases, Distributed Systems, DSA, AI/ML

Technical Skills

Languages: Python (FastAPI, Pandas), Java (Spring Boot), TypeScript/JavaScript (Node.js, Express, React), SQL, Bash
Event Streaming & Integration: Kafka (consumer groups, partition keys, dead-letter topics), REST, Microservices, JSON Schema
Data & Caching: PostgreSQL, pgvector, MongoDB, Redis (caching, pub/sub)
Cloud & Delivery: AWS (ECS), Microsoft Azure, SAP BTP, Docker, Docker Compose, Nginx, GitHub Actions, Linux
Testing & AI Tooling: PyTest, JUnit, Testcontainers, Tricentis Tosca, Claude Code, FastMCP, OpenAI embeddings, vector search

Professional Experience

Full-Stack Software Engineer – Client Service Management **October 2025 – March 2026**
SAP America, Newtown Square, PA

- Led the migration of a manual RFP process (spreadsheets, Teams folders, an in-house low-code app) to an API-based SAP BTP service, writing Python scripts to map legacy records into a new data model; **7** workflows, **$300K+** in yearly RFPs
- Scoped requirements with the product owner, validated the migration with a **3**-week parallel run and user acceptance testing, then cut over in phases across **4** divisions; the sourcing cycle fell from **4–6** months to **1–2**
- Designed and built **4** Python REST APIs (RFP intake, supplier proposals, review, contract linking) as separate services integrated with SAP Ariba, SharePoint/Azure, and other SAP systems, so new workflows plug in without rewrites
- Exposed those APIs to the AI assistant as **3** MCP tools, letting it search proposals, create RFPs, and link contracts through typed, validated calls instead of hard-coded workflow steps
- Engineered a Python pipeline that makes **30–40** page supplier proposals searchable on upload: it chunks and embeds each PDF so reviewers find answers cited to the exact page, with retries and checks for corrupted or oversized files; cut review time **70%**
- Cut API response times **50%** for **25+** concurrent users by consolidating repeated queries and caching lookups
- Used Claude Code for scoped tasks (tests, data mappings, debugging) and reviewed its output like any PR; reviewed **50+** teammate PRs, documented each API and MCP tool, and added logging and monitoring

Software Engineer – Client Service Management **April 2025 – September 2025**
SAP America, Newtown Square, PA

- Investigated a production defect hiding records from **500+** users, traced it to inconsistent query logic, escalated the root-cause fix to senior engineers, and added regression tests; access was restored within **5** hours
- Automated weekly SAP Ariba regression testing in Tricentis Tosca across every category and supplier, saving **500** manual hours a year
- Delivered RFP-to-contract linking in the CMM app (one of **31** features the team shipped), making contract creation **40%** faster
- Triaged user-reported defects and deployed, tested, and debugged team applications integrated with Microsoft Azure and SharePoint

Data & Systems Analyst – Learning and Development **April 2024 – September 2024**
SEPTA, Philadelphia, PA

- Wrote Python/Bash jobs syncing SuccessFactors API data to Power Automate with validation and error handling, halving data prep
- Rolled out an LMS with HR tracking safety training for **3,500+** drivers and staff across **45** courses, flagging overdue certifications
- Designed Power BI dashboards on the synced data so leaders self-serve compliance metrics, cutting ad-hoc report requests **35%**

Projects

NextToSkin – *Python, FastAPI, Java, Spring Boot, Kafka, PostgreSQL, Redis, Docker, AWS ECS* **August 2026 – Present**

- Developing a retail recommender as two microservices: a Spring Boot catalog service owning a **20K+** product catalog loaded through a validated, deduplicated ingestion pipeline, and a FastAPI service turning a quiz and live weather into picks
- Catalog changes publish `product-updated` events to Kafka keyed by product ID for per-product ordering; the recommender consumes them in a consumer group with retries, a dead-letter topic, and versioned, backward-compatible JSON schemas
- Added a Redis cache-aside layer invalidated by catalog events and ran **3** recommender instances behind Nginx; under load testing, p95 latency fell from **250** to **100** ms
- Kept Claude Code on scoped tasks with a CLAUDE.md and permission rules; every change is gated on PyTest and JUnit suites plus Testcontainers integration tests against real Kafka and PostgreSQL in CI

Voyago – *TypeScript, React, Node.js, Express, Kafka, WebSockets, MongoDB, Redis* **January 2026 – March 2026**

- Implemented event-driven collaborative editing: Express validates and saves each edit to MongoDB, a Kafka producer publishes it keyed by trip ID to keep edits in order, and consumers push it to clients over WebSockets (**150** ms median)
- Ran **2** load-balanced WebSocket instances with Redis pub/sub fanning each edit out to every client on a trip; tested with **4** editors
- Wrote the React/TypeScript frontend on Express REST APIs, integrating flight search (SerpApi), Google Maps, cookie-based auth, and a per-trip group chat
- Automated builds, pull-request validation, and deployment with GitHub Actions

Leadership Experience

Mathematics Tutor, *Drexel Math Resource Center* – Tutored **100+** students in Calculus **September 2023 – May 2026**
Peer Mentor, *Drexel Center for Autism & Neurodiversity* – Mentored neurodivergent students **September 2023 – March 2026**
