Education

Drexel University, College of Computing & Informatics (Philadelphia, PA)

September 2026

Bachelor of Science in Computer Science, Minors in Math & Data Science

GPA: 3.80/4.00

- Relevant Coursework: Data Structures & Algorithms, Systems Architecture, AI & ML, Software Engineering, Discrete Math

Technical Skills

Frontend & Frameworks: React, Next.js, TypeScript, JavaScript, Flutter, Dart, Node.js, Express, HTML, CSS

Cloud, Infrastructure & Security: AWS, GitHub Actions, CI/CD, REST APIs, OAuth, JWT, Git, Unix/Linux, Docker, Scalability

Languages & Databases: Python, C++, C, Java, C#, Kotlin, SQL, PostgreSQL, MongoDB, Bash

AI/ML, Tools & Practices: RAG, LLM Integration, Vector Search, Embeddings, Scikit-Learn, Pandas, XGBoost, PyTest, JUnit, Power BI, Agile, Scrum

Professional Experience

SAP America, Newtown Square, PA

October 2025 – March 2026

Full-Stack Engineer – Client Service Management

- Owned the SDLC, architecting a JavaScript/XML front end backed by SAP HANA to ship an end-to-end RFx toolkit spanning 7 core workflows, replacing a manual spreadsheet-and-email process
- Researched an existing low-code RFP process, identified critical scalability and workflow gaps, and led its full migration to a custom SAP BTP application, adopted by 4 divisions and eliminating a recurring third-party app license to save \$7K annually
- Engineered a RAG pipeline that groups and embeds 70+ page RFP documents with OpenAI ADA-002, then optimized retrieval through cosine-similarity vector search and purpose-built CDS views via a chatbot that cut financial-document review time 75% and query load times 50% for 25+ concurrent users
- Deployed and demoed the toolkit to production on SAP BTP, partnering directly with leadership on key product decisions to secure company-wide approval and rollout

SAP America, Newtown Square, PA

April 2025 – September 2025

Software Engineer, Quality Assurance – Client Service Management

- Built a new onboarding module in Procurator that accelerated new team-member ramp-up 13x, eliminating a legacy 6-touchpoint manual process
- Shipped 31 new features for CMM, a client-management platform, including an RFx contract-linking tool that auto-matches contracts to proposals by supplier, accelerating contract generation by 40%
- Diagnosed and resolved a legacy production save-failure bug tracing it to inconsistent variable naming across code paths, restoring service for 500+ users within 5 hours
- Developed a Python automation bot on Tricentis Tosca to run weekly SAP Ariba regression testing, eliminating around 500 hours/year of manual QA checks

SEPTA, Philadelphia, PA

April 2024 – September 2024

Data & Systems Analyst

- Built Power BI dashboards with DAX measures for department leads to self-monitor operational metrics, cutting ad-hoc reporting requests by 35%
- Automated the monthly operations reporting run with Bash, Python, and Power Automate, replacing a hand-assembled process and halving report turnaround
- Wrote Python scripts on Unix/Linux to parse raw enterprise data exports into clean tables for the dashboards, halving prep time

Personal Projects

Race Walking Control System – Humanitarian Award Winner

September 2025 – June 2026

- Developed an Android app in Kotlin that reads two BLE GPS shoe sensors and gives race walkers live form feedback, using MVVM to keep readings under 500ms
- Built mock BLE data streams to test and debug sensor behavior independently of physical hardware, with automatic reconnection support
- Published the app to the Play Store for coaches and athletes to use in live competition

CardWise

September 2025 – December 2025

- Built a React/TypeScript web app on a Node.js/Express REST backend with MongoDB, deployed on Vercel, that tells users which credit card to use for a purchase, tested with 15+ users
- Wrote the cashback ranking engine covering 50–60 cards and their category rules, answering in under a second at 88% accuracy

way2go

March 2026

- Built a safety-aware routing app for Philadelphia that scores streets using city crime data: trained an XGBoost model in a batch pipeline (83% accuracy, 0.89 AUC-ROC) to predict risk per area
- Combined model output with KDE crime-density estimates into one safety score used for route selection, tested with PyTest to keep scoring under 5s

Leadership Experience

Mathematics Tutor – Math Resource Center, Drexel University

September 2023 – May 2026

- Tutored 100+ students in Calculus, Discrete Math, Linear Algebra, and Statistics, and led 30+ peer study sessions

Peer Mentor – Center for Autism & Neurodiversity, Drexel University

September 2023 – March 2026

- Mentored neurodivergent students one-on-one and organized 7 campus events to build community and belonging
